SPECIAL SURVEY NO. 8

1 / Introduction

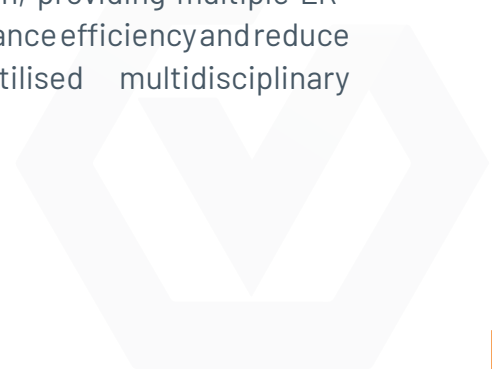

Veritech was entrusted with the substantial responsibility of executing Special Survey No. 8 for the Ningaloo Vision FPSO. This vast undertaking involved a comprehensive turn-key package,

including project management, survey planning, scope and work pack development, culminating in delivering the complete special survey and associated NDT within a tight schedule.

2 / Innovation

The Ningaloo Vision FPSO has a complex design featuring various compartments and structures. Addressing this complexity, Veritech employed innovative techniques like Ballast Tank ROV inspections and Spot Ultrasonic Thickness measurements, executed by IRATA-certified experts, to ensure standardisation and safety. Veritech's approach combined thorough project management with engineering insights, enhanced by coordinated logistics and active participation in workshops and

planning sessions. The company emphasised regular updates to clients about progress. In the execution phase, Veritech delivered a range of LR-approved testing and inspection services, including specialised ROV inspectors. They also supplied essential project equipment and were diligent in documentation, providing multiple LR-approved reports. To enhance efficiency and reduce downtime, Veritech utilised multidisciplinary teams.

3 / Project Summary

Vertech's team surpassed the expectations set for Special Survey No. 8. The scope's completion was timely and met all the key performance indicators, resulting in a successfully delivered special periodic survey for the client. The client's feedback attests to the high standards maintained throughout the project, with a consistent rating of

"10 out of 10" across all domains, including overall performance, competence, HSE performance, and project communication. This accomplishment and positive client relations and open communications underscored Vertech's commitment to excellence and client satisfaction.
